## CRASH FAKED IN SPECTRUM RAID

COMPUTERS have been fished out of the Thames — days after armed raiders got away with a £390,000 haul.

They staged a car crash to lure the security guard from a London warehouse.

He was inside the TNT warehouse, on the Cranford Lane Industrial Estate, Hornsey, chatting to the estate manager when they heard a crash outside.

A car with a girl at the wheel and a main passenger had crashed into dustbins.

The two men went to their aid — and found themselves facing a shotgun and a handgun held by two other raiders who had been waiting nearby.

One of them said: "Blow them away...it will save time later."

In fact no shots were fired and, as the car drove off at high speed, the guard and the manager were forced back into the warehouse.

They were made to get into the back of a truck which was then reversed against a wall, trapping them.

Meanwhile the three robbers loaded up two other TNT trucks with computers — mostly 48K Spectrums in boxes of 10, plus ZX81s and some software. The trucks, both orange coloured Ford Cargos, were later found abandoned.

The two trapped men shouted and banged on the sides of the truck until they were heard by passers-by and released.

The haul, worth £390,000, belongs to Prism, Sinclair's sole distributor in this country. It was

# "IT LOOKS NICE BUT WHAT THE HELL CAN I DO WITH IT?"

Every ZX SPECTRUM Print'n'Plotter Jotter has 100 pages of finely printed screen grids.

50 for the high resolution screen. 50 for the normal character screen.

With these at your disposal you can plan practically any graphics print-out to program into your computer.

The high-resolution PLOT grid shows every one of the 45,060 pixels! Every one printed. Every one with its co-ordinate numbers. This gives you enormous graphics power to DRAW, PLOT, CIRCLE, PLOT OVER and so on in any position or screen building up graphic drawings, charts, maps... in fact anything without the complications of guesswork, integer out of range, or wrongly positioned pixel colours which change PRINTED INK characters!

The normal character PRINT grids on the other hand will allow you to be specific about PRINT AT, TAB, PRINT OVER, SCREENS and INK / PAPER in direct co-ordination with PLOT... you see every page is printed on high quality tracing paper... ideal to overlay on to illustrations and 'copy' or co-ordinate.

And there's another bonus, because each page contains 24 user-definable grids — 2400 per pad!

With 50 pages of PLOT grids, 50 pages of PRINT grids 2400 user-definable grids, a set of COLOUR PENS, a printed PIXEL RULER and our Special Offer of demo programs, IT'S THE BEST VALUE IN ZX GRAPHICS PROGRAMMING.

# "NOW WHICH KEY DO I PRESS TO SHOOT DOWN THE THING FROM MARS?"

Ever forgotten which key to press when playing a game? Do you suffer from a mind-boggling mass of programmed keys? Do you write programs that use different keys to perform various functions? If so, we have just the thing for your ZX SPECTRUM.

**A pack of Print'n'Plotter Keyboard Overlays.**

Just write the function or functions under each key you program and keep the overlay for the next time you play the game. Of course there's lots of more uses you will find for our OVERLAYS, user defined characters, keyboard scanners, mathematical programs, business uses — to name just a few.

There's TEN OVERLAYS to a pack — so you can program with impunity! And they fit perfectly onto your standard ZX SPECTRUM KEYBOARD. Each OVERLAY is printed with the cursor movement key directions and there's room for program name etc.

# A SPECTRUM CONSOLE THAT EVERYONE CAN AFFORD!

For the cost of a 'games' cassette you can have a truly professional console for your SPECTRUM!

We've cut costs (not cut quality) by designing a self-assembly method using relatively inexpensive materials like strong corrugated board.

The result is a console that's tough, light, highly finished and capable of giving years of useful service.

Facilities include ergonomic keyboard angle, access to rear of machine, choice of P.S.U. Internal or external, and alternative of Printer on-board or cassette storage area. Fully illustrated instructions are included.

# "PRINTER PAPER THAT WORKS? I DON'T BELIEVE IT!"

Five rolls of our PRINTER PAPER will only cost you £12.50 including postage, packing and VAT! And you'll gain a great deal more! It prints beautifully. It's not too thick. It's not too shiny. Print is black — not grey. It actually feeds through the machine! See for yourself only £12.50 including everything. It's a bargain!

Post today to Print'n'Plotter Products, 19 Borough High Street, London SE1 9SE or phone: 01-403 6644 (General) or 660 7231 (Credit Card Sales).

*Continued from front page*  
in the warehouse awaiting despatch to retailers throughout the country.

Prism's deputy managing director Terry Brown said: "It means there won't be as many retailers holding stocks as there could be."

"We have got to try and get extra stocks so we won't build up a lead time. My advice to customers is to shop around or go back to the store later."

He said: "They loaded up the lorries very inefficiently. They left at least 2,000 computers behind when they could have taken everything that was in the warehouse."

Prism, which was insured for the loss, distributes to most UK retailers, excluding a handful of large chains, like W.H. Smith, Greens and John Menzies, which are supplied direct by Sinclair Research.

Five days later £1,730 worth of computers were found submerged in the Thames in Buckinghamshire by two boys out fishing.

There were 13 Spectrums, a ZX81 and a single power pack in two plastic bags. All were ruined.

Police are checking to see if there is any connection and an officer said: "Things are developing."

**The Oric collection**

Home Computing Weekly contributor Vince Apps has just brought out a collection of programs to keep Oric owners busy.

The Oric-1 Program Book contains 50 program listings which, according to the publishers, will allow those dedicated enough to type them all in to run an obstacle course, protect six cities from missile attack, save a maiden from a dark knight, draw graphs, weave webs, have a firework display, peek into the Oric's memory...

The book costs £6.50 direct from the publishers.

**Dragon crosses the ocean**

The Dragon-32, which was launched in the UK only last August, is now to be sold across the Atlantic.

Dragon Data has just signed an agreement with New Orleans-based company Tano to market the Dragon in the USA, Central and South America and the Caribbean.

*Dragon Data, Kenfig Industrial Estate, Margam, Port Talbot, West Glamorgan*

**Cartridge price cuts**

The retail price of Thorn EMI software cartridges for the VIC-20 and Atari 400/800 micros can be expected to fall, now that Thorn has cut the price it charges dealers.

Cuts of £5 per cartridge on the trade price will probably mean that retail prices will fall to under £30.

*Thorn EMI, Upper Saint Martin's Lane, London WC2H 9ED*

**LATE NEWS**

**Oric joins price cutters**

Price of both Oric computers have been slashed. The 48K model has been cut by £30 to £139.95, and the 16K version returns to its launch price of £99.95. Oric said that 80,000 Oric-1s have been sold in the UK and Europe, and a TV campaign was starting.

Buyers will also get a £40 voucher towards the cost of the Oric four colour printer plotter.

# QUEST FOR ANY SPECTRUM

## SIMPLY THE BEST

# THE BLACK HOLE

**THE SCENE:** Alien spacecraft are using hyperspace drive to enter our universe through a black hole. Their intent is destruction.

**YOUR MISSION:** To uphold the defence of your universe as long as possible while inflicting the maximum damage on alien forces.

**YOUR WEAPONS:** Positive and Negative Ion Guns are deadly at any range but the ion stream is bent by the massive gravitational field of the black hole. The Neutron Blaster is equally deadly but has only limited range.

**YOUR BATTLE:** You are under constant attack from the alien force which pits fiendish offence craft against you in ever increasing intensity, in deadlier and deadlier form.

How long can your fleet of ships survive? How many enemy craft can you destroy?

100% super efficient machine code allows all this action to be packed in to run on the 16K (or 48K) Spectrum. Superb animation, high resolution graphics, incredible explosive and full sound effects combine to make "Black Hole" set a new standard in Spectrum software.

Also features a special learning mode to help develop your skills.

Embedded in the software is our unique score validator which enables us to introduce a new dimension to computer games. The top ten scorers in each calendar month from April through September will receive a "I'm a Black Hole addict" T-shirt and the chance to compete for prizes to the value of £500 in a championship to be held at the end of the year. We will then publish a list of the top 1000 scorers so you can find out just how good you are.

**HOW GOOD ARE YOU?** Take up the "BLACK HOLE" challenge NOW and find out. Send £5.50 to QUEST, 119 THE PROMENADE, CHELTENHAM, GLOS GL50 1NW to receive your copy of "BLACK HOLE" by return first class post together with a membership number entitling you to discount on our forthcoming blockbusting software.

**Trade enquiries welcome  
excellent terms available  
Tel: Cheltenham (0242)583661**

#### THE TOP 6 SCORERS AT THE END OF JUNE ARE:

|                |      |               |      |
|----------------|------|---------------|------|
| RUSSELL CAPEL  | 2530 | IAN GARLINGE  | 1847 |
| MRS K. BURNETT | 2019 | STEVE EDWARDS | 1670 |
| DAVID BAXTER   | 1998 | T. SWIFT      | 1513 |

## Atari games for other computers

Atari is converting its computer games to run on other micros, starting with cartridges for the TI-99/4A, VIC-20 and Commodore 64.

The first three — Pac Man, Centipede and Defender — will be on sale by the end of the year. More Atari cartridges are also due out soon.

Steve Gerber, 37, Atari's European software development director, who has just arrived at the company's UK base in Slough, explained the new policy.

He said: "It was the Warner Corporation (Atari's owners, who made the final decision. We had been trying to persuade them to do this for some time.

"After all, if you're good at making software, why limit yourself to one machine?"

But would this mean people may choose to buy other computers? Mr Gerber said: "If you found the best software for, say, the VIC, was from Atari, would you not just buy the Atari?"

More adaptations would be coming for the BBC micro, Dragon and the Spectrum, all on tape instead of cartridges.

He said: "We are also about to launch a UK product written by a UK author. This kid just walked in the door with a dynamite game."

The Software Publishing Group was also on the lookout for more UK-written software which would, if suitable, be marketed in America as well as other countries where Ataris are sold.

New software for cartridges due out this year:

- Pole Position, a grand prix motor racing game costing £29.99 and on sale in September

Janice Gash, 25, with the new 800XL home computer from Atari

- RealSports Tennis, in the shops this month, uses the same rules as real tennis — and the players even change ends after games. Price: £19.99

- AtariWriter, a word processing program which, says Atari, offers features usually found in expensive software.

- Games for children based on Walt Disney characters and cartoon films

Atari also showed its new computers and peripherals for the first time in the UK. Prices have not

yet been decided, but they are due here this year.

Details were in last week's Home Computing Weekly, but they included the 16K RAM 600XL and 64K 800XL home computers. They are compatible with existing software and, unlike the present models, have BASIC built in. The top of the range 1450XLD, which is to go on sale here next year, has a built-in dual density, double sided 5¼in disc drive.

Other new products include three printers — the 1020, using ballpoint pens in 4½in paper rolls; the 1025 80-column dot matrix printer; and the 1027 letter quality printer running at a claimed 20 characters per second.

There is also a re-styled 1010 program recorder, 1050 disc drive, a module for the CP/M 2.2 operating system — used for much business software — which also adds 64K of RAM and switchable 40 or 80 column video output, and a box called The Expander with slots for eight expansion cards and two RS-232C and one Centronics interface.

The Expander for the new XL computers only is designed to accept products from other manufacturers.

## Fire bugs cause £10,000 damage

Fire-raisers caused a £10,000 blaze at a leading software and add-on company. And one theory is that they were teenagers angry at not finding any money.

The man who called the emergency services — a quantity surveyor working late in an adjoining office — has been thanked with a bottle of Scotch and the offer of a free meal.

The gift was from Roy Backhouse, managing director of Fuller Micro Systems, based in central Liverpool.

Mr Backhouse said: "Police think it was teenagers looking for money. They smashed the front window to get in at about midnight on Saturday.

"They couldn't find any money — so they set fire to the place. The fire brigade believe they set fire to a wastepaper basket."

Among the property, all insured, which was damaged was software, desks and files. A printer and a terminal were damaged by smoke, but the company's ICL computer was on another floor and not affected.

All 14 people employed by Fuller worked over the weekend to ensure orders were kept up to date.

Mr Backhouse said: "Even though we managed to salvage a lot of test gear it still stinks of smoke.

"It's an absolute pain that anyone could be so senseless. There was a lot of blood, so they must have cut themselves getting in.

"We probably would have lost the whole place but for a guy working late who heard the glass being broken and called the police."

The fire affected only the ground floor of Fullers, which includes showroom, reception area and repairs and servicing.

## Microdrives 'imminent'

The launch of the long-awaited Microdrives mass storage devices is now imminent, according to a Sinclair Research official.

Sinclair has said little about the Microdrives, except that they are likely to cost around £50 and will need an interface

Atari's new 600XL computer

## ZX computing US-style

The ZX81 and Spectrum that we all know and love have undergone a dramatic transformation on their way to the USA.

The ZX81 becomes the Timex Sinclair (TS) 1500, and features a silver case, Spectrum-like keyboard and 16K of RAM built in all for around £45.

Timex also sells mini-cartridges to plug into the expansion slot at the back of the machine.

The 48K Spectrum becomes the TS2048. It too has a silver case, plus a special compartment for cartridges and a hole in the side for a joystick.

It has five new commands: ON ERROR GOTO; RESET; FREE, which tells you how much memory is left; STICK, which controls the joystick; and SOUND, which activates a three-channel synthesiser.

And the TS2048 can also switch into a second graphics mode giving 64 characters per line. It's selling for the equivalent of around £135.

The X81 plus...

...And there's a 48K Spectrum in there somewhere

## Raider upgrader

Arcade Software says that Raider of the Cursed Mine, the Spectrum game it launched at the Earls Court Computer Fair, met with such a good response that it's now bringing out a new improved version.

This version, which was being duplicated at the end of last week, will have grade difficulty

levels and the option of joystick control.

And if you manage to get past level 30 and escape from the mine, you'll be rewarded with a picture of the outside world — complete with moon, stars, trees and a house.

Anyone who bought the earlier version of Raider can exchange it for the new one.

Arcade Software, Technology House, 32 Chiselhurst Road, Orpington, Kent BR6 0DG

## A to Z of software

When you've been from Arcadia to Zip Zap and Zzoom, what do you do for an encore? The two Zx are the titles of Imagine's first two games for the 48K Spectrum, and they'll be in the shops soon.

Zip Zap puts you in control of a defective robot, trying to gain the safety of a Tele Portal in the face of opposition from waves of aliens.

Its author is a new arrival at Imagine, Ian Weatherburn, who joined the company in April. But Eugene Evans' position as 17-year-old programming prodigy is safe — Ian is all of 19.

Zzoom is a game with a more familiar theme — rescuing marooned refugees from an enemy intent on wiping them all out. It was written by the grand old man of the company, 36-year-old John Gibson, author of Molar Maul.

Artistic advice on the games

was provided by Gary McNamara, 18, and Steve Blower, 33, from Imagine's very own studio, Studio Sting.

Both games will be packaged in Imagine's new-style cassette boxes. Not only that, but the Zzoom boxes even have a Latin inscription — Nomen Ludi, or "the name of the game" to you. They'll sell for £5.50, like the rest of Imagine's range.

But there's no need to feel inferior if you don't understand Latin — neither does Imagine. The motto was translated for them by the Classics department at Merchant Taylors' School, Liverpool.

And the answer to the original question could be that the company plans to start again from A. Launched along with Zip Zap and Zzoom is a version of Arcadia for the Commodore 64, re-written and enhanced by Eugene Evans himself.

Imagine, Masons Buildings, Exchange Street East, Liverpool L2 3PN

# You could be on our pages

We welcome programs articles and tips from our readers.

**PROGRAMS** should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

**ARTICLES** on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

**TIPS** are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

## Lock away your micro

Is your family starting to complain about your micro and its accessories taking over the living room? The Micro Tidy from Abacus is designed to get you back in their good books.

It comes in two models, to sit

on a desk or stand alone, and has lockable compartments for micro and cassette recorder, cassettes, manuals and cables. The television stands on top.

The basic version costs £60 and the free-standing version costs £80.

Abacus Marketing, Abacus House, 60 Barcourne, Worcester WR1 1JA

The Micro Tidy tidles up your micro

## ZX computers get a voice

You may not be able to talk to your ZX81 or Spectrum, but it will at least be able to talk to you, using the ZXS Speech Synthesiser from Timedata.

At the heart of the ZXS is the SP-0256 chip, which produces basic speech sounds called allophones. The ZXS can be programmed to combine these allophones to produce a wide range of English words and some

foreign ones.

The result can be fed either to a normal audio amplifier, or to the loudspeaker in a sound box such as Timedata's ZXM.

Looking rather like a 16K RAMpack, the ZXS has an edge connector to allow other devices to be piggybacked on to it.

Timedata reckons that at £32.50, it's the cheapest synthesiser around.

Timedata, 16 Hemmells, High Road, Laindon, Basildon, Essex SS15 6ED

Timedata's ZXS — voice for ZX computers

# Give micro addicts a fair dealer

*It's a hard life being a computer addict. You sit at home typing, or reading specialist magazines like this one, and then — you spot an ad for a new computer shop near your home.*

*Excited at the prospect of trying out that new joystick, or that new game with the super smooth graphics, or just a chat with a fellow enthusiast, you rush out at once. You return home shortly afterwards, downcast. The shop was a washout — no new programs, no joysticks, and a sales assistant who might as well have been selling double glazing.*

*Could this be you? Judging by the letters in the computer magazines, which tell of one sob story after another, I should think it quite likely.*

○ ○ ○ ○

*What on earth is the point of computer shops if people like myself can't try out new products? When even programs can cost around £8 each, us teenagers (who after all constitute the majority of home computers enthusiasts, or so the media would have us believe) with limited budgets can't afford to buy a bad program.*

*It has been debated, ad nauseam, whether or not software libraries or the Buy and Try scheme provide a solution. If our local computer shops were doing their job, this debate would be unnecessary. Any program could be tested before being bought.*

*Out of 12 well-advertised stores and specialist shops in my area, not one stocks what the ads say it should, or anything like a decent supply of software. I live in Harrow, but I buy my software from a shop in Exeter, which is helpful, knowledgeable, and gives very fast service (four days after ordering three programs, they arrived, with an apology for the delay!)*

○ ○ ○ ○

*Of course, events such as the Microfairs and the Home Computer Fair fulfill the same function. But they're only held from time to time, and not everyone can afford to go to them.*

*Software companies themselves could help, by giving clearer indications of what the program is like, what language it is written in, etc, so that customers are less likely to buy a program they don't want.*

○ ○ ○ ○

*For example, I saw the ad for Ultimate's two games, Psst and Jet Pac, and decided against buying them. I then saw them at the ZX Microfair, and have since bought them both!*

*Software houses do themselves as well as their customers a great disservice by advertising their programs in a misleading way, as so many (and I don't mean Ultimate now) do. For an arcade game to be exciting and fast enough, it really needs to be in machine code — a fact generally accepted by everyone but the smaller software companies. But once bitten by a misleading ad, buyers will be twice shy of going to the same company again.*

*In HCW 15, news of GOSH — the Group of Software Houses — was announced. I hope that GOSH's members will take note of this plea for improvement. Otherwise, I fear that the sudden expansion of the software market will stop, and the trend may reverse. Bad dealers and software must not be allowed to be spoiled for everyone else.*

## VIC-20 SOFTWARE

QUALITY ARCADE ACTION GAMES FOR THE UNEXPANDED VIC-20

**Munch Man.** Must be one of the best versions of this popular arcade game 3 lives, bonus fruit, power pills and 4 very intelligent ghosts. Price only £5.00

**Scrambler.** Race along the alien planets surface, bombing the fuel dumps and launching rockets, avoiding the asteroid clouds and mountain peaks. Price only £5.00

**Galaxions.** Shoots down the alien invaders, but beware of the swooping attackers. Price only £5.00

**Asteroids.** Your ship is lost in an asteroid field, your only hope is to blast the oncoming asteroids. Price £5.00

**Gun Fight.** Be quick on the draw, shoot your partner before he shoots you, a game of skill for 2 players. Only £5.00

**Super Breakout.** The old favourite arcade game brought back to life. Knock out a full wall to gain another. Only £5.00

**Cosmic Fire Birds.** (8K or 16K) This must be the most spectacular arcade action game, ever to be produced on cassette for the 8 or 16K expanded VIC-20. As captain of a star ship lost in space you encounter a miraculous force of winged creatures, known to the galaxy as the Cosmic Fire Birds. They loop the loop, the figure of eight, they swoop, they dive, can you survive. Full screen display, 99 progressive levels of play, 5 lives, bonus ship at 5,000 points, swimmers, bombers, leaders, hawks. Price only £9.95

All our games are written entirely in 100% machine code, superb colour graphics and sound.

Available mail order from the above address.

Also available from Micro C Manchester, B&B Computers Bolton, Micro North, Bury and soon all good computer shops.

All orders sent by return post. Trade enquiries welcome.

HCW19

# Can you save Miss Muffet from the spider?

## Hints on conversion

The program should be convertible for use on any computer with user-defined characters

**CALL CHAR** (ASCII code number, hexadecimal string) Defines characters used in the program. The hexadecimal string describes the pattern to be given to the character with ASCII code stated

**CALL HCHAR** (row number, column number, ASCII code, number of repetitions) Places character on screen at row and column specified, and repeats it horizontally the number of times stated. If this fourth value is omitted then the character is displayed only once. The character used is the one whose ASCII code appears in the command

**CALL VCHAR** (row number, column number, ASCII code, number of repetitions) Works in the same way as CALL HCHAR only repeats vertically instead of horizontally

**CALL GCHAR** (row number, column number, numeric, numeric variable) Equivalent of PEEK, assigns ASCII code of character at row and column stated to numeric variable

**CALL CLEAR** Clears the screen

**CALL SCREEN** (Colour code) Specifies screen colour, using colour code.

**CALL COLOR** (character set number, foreground colour code, background colour code) Specifies foreground and background colours for all characters in set stated

**CALL SOUND** (duration, frequency, volume) Produces sound with duration, frequency, and volume specified. Duration is in milliseconds, frequency in Hertz (or noise code), and volume in scale from 0 loudest to 30 quietest

**CALL KEY** (key unit, k,s) Equivalent of INKEYS in other computers, returns code if key pressed in variable k

**Poor Miss Muffet. She's been chased by a spider into a labyrinth. It's up to you to guide her to the golden door. Lance Booth wrote this program for the standard TI-99/4A**

In this game of luck, skill and judgement, an evil spider has chased Miss Muffet into a labyrinth, which is about to fill with deadly green slime. Can you help her to escape in time?

You must guide her — using the four arrow keys with the alpha lock button down — through the labyrinth to the golden door, the only way out.

The spider is patrolling the passages of the labyrinth, spinning webs to block Miss Muffet's

escape. Don't let the spider catch Miss Muffet or it will devour her.

Take care not to let her get caught in a web or to touch the walls of the labyrinth which are covered with the spider's venom.

You set your own difficulty

level, when line 330 asks for your time limit. This sets the limit at which the program leaves the game loop from line 690, and moves to the out of time routine at line 930. A time limit of 150 could be quite a challenge to start with, even if you get the right breaks.

Once you've had some practice, trying to work down to a limit of 100 becomes an addition.

A variation on the game, where the spider can be made to move from bottom to top, instead of top to bottom, can be achieved by changing line 490 from FOR SR = 3 TO 23 STEP 2 to FOR SR = 23 TO 3 STEP -2

**How it works**

130-250 define characters and colours  
 260 sets screen colour to black  
 270-310 assign initial value to variables  
 320 clears screen  
 330 asks for time limit  
 340 clears screen ready for game  
 350-450 display labyrinth  
 460 displays Miss Muffet  
 470 displays Golden Door  
 480-780 main game loop  
 490-770 count down spider movement rows  
 500-510 & 750 control spider's movement along columns  
 520 checks keyboard  
 530 clears old player from screen  
 540-610 check for movement  
 620-660 check new screen positions  
 670 displays new player  
 680 adds one to penalty score  
 690 tests to see if limit is exceeded  
 700-710 check new spider position  
 720-740 move spider  
 760 displays web  
 790-810 touched the wall  
 820-890 eaten by spider  
 900-920 trapped in a web  
 930-990 ran out of time  
 1000-1060 play music  
 1070-1220 escape  
 1230-1250 display message  
 1260-1280 want to play again?

```

# ARCADE ACTION ORIC-1 ADVENTURES

## DINKY KONG

For 48K £6.95

### SUPER M/C ARCADE GAME

- Skill Levels, Full Colour, Platforms, Ladders, Fire-balls, Rolling Barrels, Umbrellas, Hearts, Hall of Fame, Sound Effects.

You won't see a better game for the Oric.

\*Author — Adrian Sheppard.

## ORICADE

For 48K £8.50 inc.

- Assembler/ Disassembler/ Editor
- Handles full 6502 mnemonics Features Save & Reload M/C Assemblies & Disassemblies at any address

You can't program seriously without Oricade.

\*Author — Adrian Sheppard.

## MORIA

For 48K £6.95 inc

A challenging adventure set in the mines of Moria.

- Can you survive encounters with the monsters of Middle-Earth? Will the wizard help you? Are you fated to die beside the sealed doors? Or have you the power to open them? Unless you find Durin's Ring you will never leave the mines alive!

\*Now available from branches of Laskeys

\*Dealers enquiries welcome excellent trade terms.

\*Ask for Severn Software at your local computer store

## JOGGER

For 48K £6.95 inc.

### REAL M/C ARCADE ACTION

- 4 Screens, Skill Levels, Full Colour, Road, Cars, Lanes, River, Crocs, Logs, Hall of Fame, Sound Effects.

Perspire your way up the screen.

\*Author — Adrian Sheppard.

## GRAIL

For 48K £6.95 inc.

### Exciting Graphic Adventure

Where in the Castle Perilous is the Holy Grail? Gather armour and weapons to fight monsters. Sell treasure to a trader in exchange for strength potions and wound ointment. Where will the warp take you to? This is a test of skill, luck, logic & intelligence.

Please send me your program.

## SOFTWARE REVIEWS

### Airstrike Atari 400/800 £14.95

English Software, 50 Newton St, Piccadilly, Manchester

Airstrike seems popular as a demonstration at shows, and I can see why. It's a very good implementation of the arcade game Scramble.

There are all the usual objects — rockets, fuel and ammo. Jumps, mine storms, enemy aircraft and airlocks to be blasted through with the famous scramble landscape of ragged terrain and various curves. After com-

pleting a level, you enter a more difficult one.

Your ship has a very positive feel, with missiles and bombs operated by the joystick button and the space bar. Fuel, score, remaining bombs and missiles and ships are all shown during play. The balance of this game is a lesson to others.

### Skramble VIC-20 £5.99

Rabbit, 380 Station Road, Harrow, Middx HA1 2DE

Some of you may have noticed a similarity between the name of this game and that of a popular arcade game. This is no mistake!

Across an alien landscape flies our hero, dropping bombs and shooting things. There is no division of control between the gun and the bomb, fire one and you drop the other.

The enemy consists of what appear to be free-standing avatory buildings with

associated winding gear. Late little rockets are launched at our space ship, which seems to be oil-bred, as it is large tanks of this that we must hit in order to keep fuel up.

There are some pretty spiders to shoot next, and then the game gets difficult.

I liked this game but it is rather flawed by the scoring system. Cumulative score is kept on the screen all through the game and then it disappears!

T.D.

### Annihilator VIC-20 £5.99

Rabbit, 380 Station Road, Harrow, Middx HA1 2DE

This is a Defender sub-clone, and I reckon it's a pretty good one. You know the plot: you're patrolling the rocky terrain of a distant planet when who should appear but etc, etc.

Arcade games provide software writers with games to copy but also with impossibly high standards to reach. This time, the shortcomings of a little memory have to a great extent been overcome by adaptation. The attackers come in waves, and the mobility

of the defending space ship is limited.

However, this is a very well thought-out game, and one that should provide a great deal of pleasure for many of its purchasers. It sounds like a whole arcade of space invader machines gone crazy, but let's not hold that against it.

## Legends in their own lifetime

Invaders, Scramble, Defender, Preppie — names that have gone down in microcomputer mythology

### Preppie II Atari 400/800 32K (disc) £25.49

From Atari mail order companies

Yes folks, he's back. Just when the other micros thought they were catching up, Wadsworth Overcash — America's Number 1 Preppie — is in again.

This time the owner of the Nasty Nine, furious after his defeat, has Wadsworth painting the floor of three mazes, while avoiding collision with the obstacles retained from Preppie. In the third and first mazes are

numerous giant frogs out for revenge.

Preppie II is completely new and once again has incredible music and colour, with a cartoonish break between each of the five levels. The hi-res startup screen puts everything else to shame. Simply the best.

### Invaders Oric-1 £4

Arcadia, Freeport, Swatsea SA3 4ZZ

Hasn't Arcadia done well? There really isn't much difference between this and the original arcade game.

The game is colourful, with good, if subdued, sound. The control keys are well chosen, and don't require any complicated finger gymnastics when the action heats up.

On-screen instructions are good and unstuffy, the game is fully crash-protected and well presented. The high score flashes and plays a tune when you beat it.

# At last! A joystick that works!

Cambridge Computing bring you the first intelligent joystick.

Works on all existing software - regardless of which keys the program uses. No need for specially written software. Features include

- Compatible with Spectrum, ZX81, Jupiter Ace
- 2 Independent Fire Buttons
- 8 Directional Microswitched action
- Plugs into edge connector
- Interface complete with edge connector
- Atari joystick compatible
- Joystick with Interface £29.90

Enquiries from dealers are welcome, ring Anita Kirkland on 0223 522905

# Your mission: save the fleet

**Just you and your Spectrum can defend the fleet against a rain of bombs in Susan Kennedy's program**

sight movement loop approximately every 400 msec by testing for a difference of 20 in the least significant time frame byte from the time of the last bomb move-

ment. This is less accurate than using all three time frame bytes, but much faster, and the occasional quick movement of the bomb is not noticeable in the overall effect.

The time that could be taken to detect a hit on one of the ships would be slow if one had to search an array of screen locations.

This problem is neatly overcome by giving the ships a unique character attribute (41) and as much a hit can be detected by simply checking the attribute of the next bomb position. Once a hit has been established there is no longer the need to save time and a search can be made to find which ship was hit.

This game is fairly simple in concept and is aimed at showing that by giving thought to time

#### Variables

- C current score
- B% best score
- S(I) array of ship locations
- T current system time
- T2 system time at last bomb move
- X, Y target sight screen position
- C bomb left count
- X2, Y2 bomb screen position
- A5 input key pressed

saving an arcade game can be written in BASIC. However, providing the time available to moving the gun-sight is maintained, many improvements could be made such as:

- Slow down bomb movement but increase the number of simultaneous bombs
- Introduce graphic lines of fire from the ships
- Introduce random explosive flashes on the screen aimed at confusing the player

I recommend that you first type in and run lines 10-50, which set up the user-defined graphics. This will aid you when typing in the graphic lines in the rest of the program.

The graphics are: A bomb, B gunsight, CDE ship, FGH submarine, I explosion

**How it works**

10-50 set up user-defined graphics  
60 initialise best score and score  
80-90 POKE system variable to force CAPS lock  
110-160 set up array of ship character  
170-210 initialise variables, INK to black, PAPER cyan  
220-240 draw sea. Now PRINT on 32 spaces  
245-300 draw the ships. Now INK 0 PAPER cyan  
BRIGHT and no FLASH. give display character attribute 41, colour of the ships  
310-360 update scores and initialise target sight X, Y screen centre  
370 compute random bomb and position  
395-490 input arrow key pressed and move sight accordingly ensuring sight stays within screen boundary  
490 GOTO 1000 if F key pressed  
510 GOTO 2000 if time 99 mins or bomb  
1000-1040 check for bomb hit and adjust score accordingly  
2000-2030 move bomb, accounting for any PAPER change  
2040-2160 is ship hit, i.e. bomb coincident with location of attribute 41, then search for which ship and explode it  
Subtract 50 from score  
2200-2230 if sea bottom reached explode bomb and return to produce new bomb  
3000-3030 end of game questions  
4000-4000 bomb explosion sub-

Save the Fleet puts you in charge of a gun-sight with which you must aim and shoot down the bombs that are dropping on your fleet of ships.

The four arrow keys (5, 6, 7 and 8) control the gun-sight movement with the F key being used for the fire button.

The bombs will appear randomly across the screen and at varying heights, thus increasing the uncertainty during the total attack of 50 bombs.

Scores in the game are accumulated by intercepting the bomb, with a higher score, the higher up the screen the bomb is hit. If you are too slow and a bomb hits a ship then you lose 50 points.

In order to maximise the speed of gun-sight movement whilst maintaining bomb movement and to overcome the problem of the Spectrum screen layout, a few interesting techniques have been employed.

The program leaves the gun

They're here....  
the **Space Zombies**

The latest  
Space Arcade Game  
from **MIKROGEN**  
for 16K/48K Spectrum

Please send 4.95 per order for post & packing. H.W.S.

Name \_\_\_\_\_ Address \_\_\_\_\_

Mikrogen, Dept A1, 24 Agar Crescent, Bracknell, Berkshire. Tel. 0344 27317. 9am-5pm

Access for Visa Card holders telephone 0344 27317. 9am-5pm

**Are your  
finances driving you mad?**

Do you find that working out your finances makes your head buzz? Do you see red? Don't worry, now you can have Hilton's **Personal Banking System** on your side, giving you a clear head start and helpfully putting you back into the black!

Maintain permanent records and fully detailed statements of your finances including:

- \* All cheque book transactions and bank receipts
- \* All standing order payments

**Automatically Processed** (monthly, quarterly, six-monthly or annually and for set number of payments)

In addition the ability to search, locate, delete or correct previous entries. List by category facility is included. Additional **Bank Reconciliation** module available to automatically match your Bank Statement to your **Personal Banking System** account!

Full instructions included and **guaranteed** after sales maintenance provided

- \* **PBS ZX81** £8.95 (16K)
- \* **ZX SPECTRUM** £9.95 (48K)
- \* **DRAGON** £9.95 (32K)

Bank reconciliation (for use with above) is available for the ZX81 and ZX Spectrum. Ask for details on request. Order by cheque or credit card. Price includes postage and packing. H.W.S. 1983

# WINDOW ON ANOTHER WORLD

## NEW RELEASES FOR DRAGON 32 FROM

### Salamander Software

**FRANKLIN'S TOMB** £9.95  
Franklin's Tomb is an adventure for one player. Can you, as Dan Diamond, solve the riddle of the crypt of a villainous, previously mysterious, so many other before you? Franklin's Tomb comes complete with a 20 page fully illustrated case file.

**EVEREST** £7.95  
Nestled on the border between Tibet and Nepal, the highest mountain in the world, Everest, Goddess Mother of the world, towers five and a half miles above sea level. In 1953, Sir Edmund Hillary and Sherpa Tenzig Norgay were the first men to conquer the incredible. Now you have the chance to scale the summit of Everest, the roof of the world. Will you attempt the feat? Or will your name live forever in the annals of mountaineering history?

**GRINDRUNNER** £7.95  
By the year 2190 the Earth is a barren and desolate wasteland. With all the raw resources used up, the human race's last hopes rest with a huge, orbiting solar power station known as GRID. Now the GRID has been invaded by a race of evil droids from Frigidax. An entire planet's salvation of Earth. To combat these droids, an incredibly powerful and manoeuvrable ship, the Grindrunner, was developed. Your mission: stop the droids and save the Earth. Grindrunner is an arcade game requiring 1 joystick.

# DRAGON PROGRAM

## Plasma bolts at the ready

Those aliens are at it again. See how many you can blast into oblivion in Brian Hughes' game for the Dragon

The object of Dragarak is to shoot down as many aliens as you can as they try to move erratically up the screen and past your space station

You have control of horizontal movement through the right hand joystick, but don't get too close as you shoot or you may collide!

You score 100 or more points for each alien you destroy depending on how far away they are when you hit them

- The game ends when,
  - Ten aliens have got past you or
  - You have run out of plasma bolts or
  - You collide with an alien

There is a continuous read-out at the bottom of the screen showing, from right to left, the number of lives the aliens have left; your current score; and the number of plasma bolts you have left

### Variables

**Arrays**  
 SP space station graphic (base)  
 BL/LB blanking graphics  
 FX explosion graphic  
 TH alien graphics  
 No to N9 numeral graphics for score display

**Simple**  
 X,Y co-ordinates of space station  
 X1,Y1 co-ordinates of space station's previous position  
 XF,YF co-ordinates of alien  
 FX,FY co-ordinates of alien's previous position  
 PB number of plasma bolts remaining  
 LV number of lives remaining

```

**How it works**

30 sets a background of random dots  
 40 checks star  
 40 increase speed  
 50-60 check joystick  
 70-80 check alien  
 90 check alien  
 100 check alien  
 110 check alien  
 120 check alien  
 130 check alien  
 140-220 check alien  
 230-290 check alien  
 300-370 move alien  
 380-420 make explosion  
 430 update score  
 440-480 collision  
 490-510 reset variables  
 520-710 update and display  
 720-940 sets up all the graphic arrays to be used in 'put/get' operations in the main loop  
 1000-1080 "do you want to play again?" screen  
 1090-1230 fill screen with playing instructions. There is a delay loop at 1230 which can be altered if wished  
 1250-1290 sets up machine code routine for screen inversion

**Hints on conversion**  
 Not recommended! Definitely a case for writing your own version. If you have a machine that supports user defined graphics and allows text on graphic screens then you could construct a more compact program than this

```

300 XF=FX YF=FY
310 IF F=0 THEN 490

# FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines

*"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."*

# Computer flights of fantasy

Know the fear of flying with these aerial adventures for a range of micros.

## Nightflight Dragon 32 £7.95

Salamander Software, 27 Ditching Rise, Brighton, East Sussex BN1 4QL

If this is a flight simulator I am green with yellow stripes (I'm not). The Dragon can do, and has done, much better stuff than this. The best thing about the game is the opening title page, and even then they played Those Magnificent Men in their Flying Machines wrong! Low resolution graphics, had use of colour and unrealistic

sound. The screen did not look at all like a plane cockpit...no dials, all the same presentation. I would now like to say "on the plus side", but there isn't a plus side. I suppose the instructions were clear(ish) but they weren't relevant to the game. Psion's flight simulation program for the ZX81 is much better than this, it has higher resolution graphics, is more responsive and more realistic.

|                 |     |
|-----------------|-----|
| instructions    | 80% |
| playability     | 10% |
| graphics        | 10% |
| value for money | 30% |

## Night Flight TI-99/4A £5.00

Stainless Software, 10 Alstone Road, Stockport, Cheshire

As commander of the Starship Pataram, it is your task to clear a landing strip in a hostile city defended by ground lasers and spacecraft.

This is an addictive game which requires dexterity to manipulate the 10 keys needed to play. There are plenty of skill levels and great scope for player improvement.

You score points for forward movement and firing splat bombs but these diminish your fuel. Points are also awarded for

destroying the enemy, safe landing and refuelling. High scores can be saved on tape.

This is a lengthy program to load but there is only a minimum delay in setting up. It has at least two bugs: 1 The acceleration command lets your ship eat the right-hand boundary. 2 Bomb speed keys are inoperable if ship's control keys are reselected.

|                 |     |

| value for money | 90% |

## Winging It TI-99/4A £10

Not Polyoptics, from Stainless Software, 10 Alstone Road, Stockport, Cheshire SK4 5AH

Could this be the first flight simulator for the TI? Once you've mastered basic flying, you can progress to one of three games. In game 1 you locate and fly over a meteorite, game 2 sets you the task of finding and destroying a flying saucer, and in game 3 you are pitted against an enemy plane.

There's no 3D view of the runway or the like, but there is a first-class display of the instru-

ment panel, and realistic engine noises. Comprehensive instructions are supplied.

The instructions warn that beginners may have a rough ride, and they aren't kidding. Taking off was OK, but once in the air I found an affinity for flying upside down and making unscheduled and rather violent landings.

Still, practice makes perfect. I thought this was an excellent program, which should appeal to budding pilots of all ages. D.B.

|                 |      |

| instructions    | 100% |
| playability     | 90%  |
| graphics        | 90%  |
| value for money | 90%  |

## Landfall BBC B £7.95

Virgin Games, 61-13 Portobello Road London W11

This is a sort of sophisticated Lunar Lander though as the landing process is all done by instruments it could be more aptly described as a spaceship landing simulator.

The overall effect is very convincing colour unobtrusive but effective, and the sounds (which you can switch off) are realistic.

Landing safely is no easy feat - you really have to watch all the gauges and keep a balance

to avoid being burned up on entry. I never managed to land at all, and would have liked some sort of variable difficulty level or practice option.

The program loads in three blocks, and after loading the first I had all the signs of a crash on my hands. After several attempts I just let it continue and it loaded the second block. A screen picture, then the game.

|                 |     |

## Up Up and Away Atari 400/800 £14.95

Starcade, 15 Moorfields, Liverpool, L22 8QJ

If you've worn your nerve-endings to a frazzle with pacman, invading creatures and perilous adventures, perhaps you think hot air ballooning would make a nice quiet change. Take it from me - Up Up and Away will make you want to keep your feet firmly on the ground.

You take off with a limited amount of butane and ballast, and your aim is to fly round a cir-

cuit avoiding hazards on the way. These range from nasty little boys with slingshots, updraughts and downdraughts, thunderstorms, the local Flying School for the Short-sighted, and even incontinent pigeons!

The graphics are among the best I've ever seen, and the five levels of difficulty will provide a long lasting challenge.

|                 |      |
|-----------------|------|
| instructions    | J.P. |

# Give your VIC lots more character

There are few items of software available for the VIC-20 that do not use custom designed characters in some way. Most home computers have the ability to display user defined characters but the VIC seems to have better facilities than most.

In short, the VIC enables you to redesign a full set of 256 characters. In fact, by switching between the ROM sets, a 256 full set and a 128 half set, you have access to a grand total of 640 characters (and that's enough for anybody).

The one big nuisance with user defined characters is the designing/entering stage of the characters. To the uninitiated, this process involves:

- A Design the character on some kind of eight by eight grid
- B Calculate the data value corresponding to each line of the character.
- C Enter the data values into the right portion of RAM in the VIC.

In all, this job is soul destroying, tedious and unnecessary. The logical approach is to use a program to perform all the work. A number of software houses have accepted this fact, and a number of character designing routines are available, at a price.

I have used a number of commercially available programs and came to the conclusion that none provided an adequate environment for the design of large numbers of new characters.

In this light, I have developed a routine which provides all the necessary facilities. This article describes the routine and give instructions for its use.

First I will give the basic design criteria I specified for the routine.

- 1 The routine must enable the user to create 256 new characters at one sitting without recourse to unwieldy use of tape storage.
- 2 All data manipulation should be fast with use of machine code as required.
- 3 The program should allow you to create 'macros' consisting of up to 25 characters.
- 4 The editor should offer as many facilities as possible but remain uncomplicated.

## Take the tedium out of redesigning characters. Allen Webb's program for the VIC-20 does the work for you

Figure 1 — memory map

|                |        |
|----------------|--------|
| STORE BUFFER   | \$4000 |
| EDITOR PROGRAM | \$3800 |
| EDIT BUFFER    | \$1C00 |
| MACHINE CODE   | \$1400 |
| SCREEN MEMORY  | \$1200 |
|                | \$1000 |

- 5 There should be facilities for the saving and loading of character files on tape and the down-loading of the character block to the correct RAM area.

In view of these requirements, it soon became clear that a memory expansion of at least 8k was necessary. The operational foibles of the 6560 chip are such that any new characters must reside at specified locations between \$1000 and \$1E00. As a consequence the bottom of BASIC must be raised to accommodate the characters. Figure 1 gives details of the new memory map.

The simplest method of handling the characters was to use two storage buffers. An edit buffer located at between \$1800 and \$1A00 is used to hold the block of 64 characters during the editing process.

A larger storage block residing at \$3800 is used to store the full 256 characters as four blocks. Blocks of 64 characters are then moved from the storage

buffer to the edit buffer for design and then back again for storage.

The first step is to type in the program. Do this as you would any other program but **don't run it yet!** Save the program. Reset the VIC by a SYS 64802.

- Type in the one line program 10 POKE 44,28: RUN
- Execute the direct command POKE 642,28: SYS 64824
- Load the character editor. Type in POKE 44,18 followed by Return
- SAVE the program as normal

You now have a relocated routine as described in Figure 1. I suggest that you make at least three verified copies of the routine (accidents can happen!) You can now run and debug the program.

Now the hard work is over, we can now get down to using the

program. On running you will see the main menu. You select the options by pressing the corresponding number.

Option 1 enters the edit mode and gives you a screen similar to Figure 2.

The display is rather crowded so I'll give a quick run down on the items. The top three lines show the 64 characters in the edit buffer. The character being edited is printed in cyan to distinguish it from the rest. The edit window is the 8x8 grid in which the character is designed. The macro window is used for building up complex forms out of several characters.

The column of numbers between the windows are the data values for use in data statements, if required. The command line is used for input prompts. The bottom two lines summarise the commands available in this mode.

On entering edit mode the first character is selected for editing. This character is drawn in the edit window and the corresponding data values shown. A chequered edit cursor is printed in the top left corner of the window. This cursor is printed in the top left corner of the window. This cursor can be moved with the normal cursor controls (ie up, down, left, right & home). Pressing return will send the cursor to the extreme left of the next line down. CLR will clear the edit window. Pressing \* will set the point under the cursor and SPACE will clear the point. The data values and the character in the top three lines will change as you edit the character.

Two commands enable you to change the orientation of the character. I will invert the character. R will reverse or reflect the character.

Once you have finished with the character you can move on to another by one of two commands.

N will move on to the next character. G will goto any specified character.

You can copy any character by pressing 'C'.

You enter macro mode by pressing M. You will then be asked if you wish to clear the window. You can specify the size of the macro up to a size of 5x5.

A cursor will appear and you will be asked to enter the characters to be used in the macro. The character currently under the cursor will be given as a default value to help prevent unnecessary typing.

# Messing about on your micro

Want to tamper with the inner workings of your micro? Perhaps one of these programs might be of service.

## Ace-Atari Cassette Enhancer Atari 400/800 £7.95

English Software, 50 Newton St, Piccadilly, Manchester

This piece of autoboot machine code is loaded before you start a BASIC programming session on your machine. It has three distinct parts, each encompassing the previous parts

Firstly, the enhancer allows CSAVE programs to be named, and gives a VERIFY Second, there is the utility package, giving

RENUMBER, variable DUMP and AUTO line numbering

Lastly, there is a machine-coder, for those wanting to include machine-code routines in their BASIC. Binary files may be saved and loaded, as well as verified

All three parts contain useful options, although the machine-coder is perhaps the least useful of the three. Ace loads into 4K if all three parts are selected, and will remain in place until you switch off

## The Visual Processor £5.95

Gilsott, 30 Hawthorn Road, Barry, S Glamorgan CF6 8LE

The idea behind the program is good, but the implementation is weak. The action of an imaginary processor is simulated by a BASIC program, with provision for assembly, disassembly, store modification, and even save and load. Since the maximum length of the simulated program is 32 locations, the latter provision seems unnecessary

Only sixteen instructions are available the memories being DA, STA, INA, OUT,

ADD, NEG, LST, LSR, SBC, ADC, ROT, CMP, JMP, JNZ, JNC and HIT. This offers very limited scope for program construction. As a means of teaching a beginner how to handle machine code, it is like using a kiddie car to train for world championship motor racing

To make matters worse, there were inconsistencies in the coding. The user, told to use 'end' to return to the main menu eventually finds that the required input is 'END'

## Monitor Jupiter Ace £5.95

Jupiter Cantab, Cheshunt Building, Bateman Street, Cam bridge CB2 1LZ

A fairly standard utility program featuring the usual machine code facilities, with the useful options of reading the stack and using FORTH words interactively from within the monitor

A bufferfull of bytes can be poked directly into nominated addresses, but there is no provision for reading the amount of memory left and the monitor will

cheerfully list the contents of non-existent memory addresses - try FFFF'

Hex, octal and decimal bases are available but the main display uses only half the screen and there is no automatic carriage return between successive inputs

This produces a rather untidy display and provides less information than the Remsoft toolkit with which this monitor will inevitably be compared

## SYS 64 Spectrum £6.95

Artic, 196 James Reckall Ave, Hull, N Humberside

For anyone familiar with 64-column displays, the 12-column Spectrum format seems rather cramped. Here is a program to solve that. Load it, and half width characters are printed on a 64-column basis. Even listings appear at 64 characters per line

There was one slight snag with loading the tape - precise, two that the 16k and 48k versions were on each other's sides of the

tape and then it was found that LOAD was more successful than the recommended LOAD. CODI, as it brought the initialising routine into action

The actual conversion program lies at the top of store, taking up nearly 2k of RAM (7A9, FF58 in 48k). It changes the interrupt mode so that it can poke form the necessary conversions

These appear to be the replacement of normal character shapes by half width versions that are combined in pairs as single characters to be output

The process is not without its difficulties. Picking up the interrupt for a fresh screen calls for the addition of PAL SE 1 after each

clear screen command. Command lines at the bottom of the screen appear in small characters at normal spacing

In general, the system works, though the narrow characters are not always as clear as might be wished. It also works on the printer, providing a PRINT action is called before each LPRINT. The character size can be switched from normal size to half size within a given display, and for new BASIC programs it gives useful added flexibility of presentation.

# We'll teach you how to draw

Take Peter Shaw's advice and creating drawings will be a lot easier with your Oric. You'll find his sample program has a strangely familiar result

Although the result of this program has only a novelty value, the way in which it its final aim has other uses

I'm sure most Oric owners have played around with the graphics commands ova, circles, frantically waving lines, the lot!

Armed with a Print 'n' Plotter jotter — they're not totally exclusive to the Spectrum — I first draw my initial design. One good thing about the Print 'n' Plotter jotters is that they are transparent, so you don't have to be an amazing artist. You can trace the design.

**Hints on conversion**  
For computers such as the Spectrum just change CURSET to PLOT, and change every DRAW statement to DRAW D1,D2. Owners of other computers which only have absolute draw will have to re-write most of it. I'm afraid.

If you have looked at the listing, you will have noticed that each letter is treated as a single unit. This has two advantages. First, debugging is a lot easier, and secondly when a letter is used

twice it is a lot easier to just edit the block and get all them looking the same rather than re-writing a new m and getting

**Variables**  
D1 relative draw position (X value)  
D2 relative draw position (Y value)  
A loop to read information into D1 and D2

something which has no resemblance to the first one

In every unit (with only a few exceptions) there is a REMark, followed by a CURSET command which fixes the position on the screen where you're going to put the letter, and then a loop which reads data in the part immediately following NEXT A

The information read into D1 and D2 is the X-Y relative draw positions of the next line. There are places where you can cheat a little, ie the e is a circle with a couple of points unplotted

With this information in mind, you can now type in the program, change it as you wish, and design your own personalised logo.

**Psst  
£5.50**

Ulman & The Green Ashby de la Zouze Lakes U16511

Psst is a manoeuvring and shooting game set in the back garden of 'wee' Robbie the 'hot' back garden!

All exotic flowers growing, protected by Robbie, but the the y nasties bugs are set on eating Robbie's flower. Each special bug requires a different type of spray to be destroyed.

The flower will bloom if bugs can be kept away from it. When it does, you move onto the

next level where there are more and different forms of nasties.

Compost bags, fly swatters and watering cans will increase your score if you pick them up.

Graphics are smooth, moving and colourful and the sound effects are fabulous after that! Easy. You can use keyboard or controller sticks.

Definitely an addictive game.

**Robon  
£5.95**

Snack 329 Croxley Road, London SE 24

The hubb with this programme is the fact it's easily modeled on Beeski, so at least you know what you're getting.

To the uninitiated the game is based on a series of mazes made up with electric fences. Touch one and ZAP! You are pursued by a number of Robons who not only must avoid the fence but use your Laser Gun.

If they catch you their target is deadly. Dugging and weaving is a highly recommended way of increasing your chances. Beware! The Robon is waiting to

appear. Try to hang around to long and then KAPOW! Another hit tries the Laser Gun mazes to low for the skin.

Rather superior graphics mark this game. It also does the quality of the sound.

One of the features of this is the facility to change the speed. You may not think that but it can be useful to add substantially to the value of the game.

**Megapede  
£5.95**

Snack 329 Croxley Road, London SE 24

Based on the caterpillar and the Megapede weaves its way towards the through the mushrooms.

At various points the enemy is heightened by the appearance of the deadly Sid the Spider and Scorpion the scorpion who drops deadly fleas.

The game itself is an all colour, all sound affair with sound. The graphics are well done but you are amazed in the strict sense of the word. They

lead to what I found the 'wreck' instead.

The sound is however so smart that you have to work hard to realise what's happening. The sound could be improved, but I suspect that both of these factors are related to cramming the code into the smallest of the two Spectrums. There is a lesson what can be done with 96K.

Let's face it — the sound from your Dragon 32 wouldn't win any prizes at an Eisteddfod. What you need is a:-

Dragon 32  
**SOUND EXTENSION  
 MODULE**

- Fully-cased module plugs into cartridge port
- Provides 3 channels of sound; 3-note chords and harmonies over 5 octaves
- Uses new BASIC command. No need to 'Peek' or 'Poke'
- Many built-in sound effects (e.g. bomb, laser)
- Music and graphics can occur together without loss of speed
- Based on popular, well-proven sound generator
- Two Input/Output ports included
- User manual provided, with examples

Cheque/P.O. to:-

**Catcha Snatcha**  
**£5.50**

Imagine, Masons Buildings, Exchange St East, Liverpool

A disappointing game which could have been interesting, if a bit more time had been spent ironing out the bugs

As a store detective you must patrol the corridors of your store preventing shoplifters from perpetrating their wicked deeds. Your duties also include returning lost property to the lost property office and disposing of the occasional parcel bomb

Graphics and animation are good, but a bug causes the player to occasionally leave a trail of

debris behind him. This stops the game and requires reloading to continue

Another fault is that at six o'clock on the store clock the rush hour starts. Then the shoplifters speed up so much that you can only stand and watch as your score falls and falls until the game is over. When a new game begins you are back in the middle of the rush hour again

# Playing around with your VIC

Here's a selection of new VIC releases, rated for you by our review panel

**Innovative Cassettes 1-3**  
**£5.95 each**

Melbourne House, Glebe Cottage, Station Road, Cheddington, Leighton Buzzard, Beds LU7 7NA

Several games on one cassette sounds like good value for money until you take into account other factors — like quality

These three games compilations are sadly lacking in this respect. Written in BASIC, they are very slow and lacking in detail. Small children — no older than eight — might enjoy the strange sounds and bright col-

ours, but for anyone older, they're a definite no-no

All the games on the Innovative Cassettes are available in book form, where they are arranged to teach BASIC programming techniques to beginners to computing while entertaining at the same time. Fair enough

With this in mind, the book is much better value for money than the cassettes.

M.B.

**Cyclons**  
**8K or 16K**  
**£9.95**

Rabbit Software, 380 Station Road, Harrow, Middlesex

'Yippee! An invader game with a new scenario. Excuse the outburst but new ideas are a rarity nowadays

Consider an asteroids-type arrangement in which you and the aliens float about the screen. You attempt to shoot the aliens by firing in any of the eight standard directions. The opposition will either shoot back or try to ram you

As you kill an alien, it is replaced with a new one. The

numbers increase as you survive. In the higher levels, nasty homing aliens appear and they are tough to deal with.

You can select one of three options. These are fast start (to skip the easy bit), homing bullets and landscape. The last option draws a range of hills along the bottom of the screen. Colliding with this results in death. You can select any of these options in any combination to give the difficulty of your choice

|                 |      |

A.W.

**Cosmic Fire Birds**  
**8K or 16K**  
**£9.95**

Solar Software, 51 Meadowcroft, Radcliffe, Manchester M26 8JP

I suspect that Solar must be suffering from a plague of bad tapes since I had no end of trouble getting this program up and running. Solar were most helpful and supplied a second tape in record time. This tape was no better. As a consequence this review is based on only one test session.

This game is a sort of invader cum galaxian cum phoenix game in which you try to repulse hordes of different alien species. There

are four different types of nasties with differing modes of violence and different point values. You have five initial lives with which to slice up as many of the opposition as possible

The use of colour and graphics were up to a good standard and the aerobatics of the aliens were quite amazing. The game is of progressive difficulty with each level imposing greater amounts of anguish

A good but slightly overpriced game.

A.W.

**Pakacuda**  
**£5.99**

Rabbit Software, 380 Station Road, Harrow, Middlesex

This is a rather jolly version of Pacman involving the consumption of lots and lots of fish

Not only fish, but eel-type things as well. It doesn't tell you in the instructions, but somehow you will probably work out that eating the eels causes the hunters — some unsavoury octopi — to become hunted (ie eaten)

Joystick only, which I think is a bit of a shame. Not that I dislike wagging a joystick, you understood, but keyboard control allows finer movement

If you are looking for a Pac-

man look-alike, this one is about average. If you really sweat at the thought of fish, look no further

T.D

# Brain trainers for your ZX micro

Practice makes perfect in learning any subject and if practice is what you need, a micro is the ideal way to get it. It never gets tired or bored or loses its temper, and it's fun to use as well.

My first program is designed to ask questions on any subject or topic. At the moment it's set up for general knowledge, but you can change the questions simply by changing lines 200 to 780.

The format is easy: the first line asks the questions, the second stores the correct answer in Q\$, and the third line RETURNS to the main loop.

I've written the program to choose 10 random questions from a possible 20, ensuring that there is no repetition per run.

### How it works

50-93 asks which type of sum is required, difficulty level and speed (length of time for answering). These are stored in WS, A and D respectively.

97-110 set variables according to levels inputted. X and Y become limits for random numbers.

120 sets up loop J to give 10 questions.

130-140 get two random numbers (A and B) to limits of X and Y.

150-170 check for valid sums, depending on type, to give positive integer answers.

180 puts sum into a string (SS).

200-210 print the sum.

220-290 empty AS, set up loop I to time specified by input D. get input by INKEYS (stored in QS). If key D is pressed, then delete last character (number) entered. Spectrum version should also include OR QS="d" THEN... Checks valid key. If OK adds it to AS and prints it.

300 stores the value of the correct answer as a string in Q\$ ready for checking.

310 calls checking subroutine.

320 goes back for next sum if less than 10.

330 calls end routine, but at 3500 first to moify display.

9500- print additional information before jumping to standard routine at 9110.

```

## U.S. SCENE

# Whiz Kids show to go ahead

A few weeks ago I mentioned that a pilot film had been produced, called *Whiz Kids*, which was to be the possible forerunner of a TV series of the same name.

Well, it turns out that CBS (a major American commercial network) is planning to make a series out of the idea, regardless of how well the pilot show does. This is very unusual, as networks typically wait for the poll results before committing themselves to such a financial burden.

Apparently preliminary testing has resulted in a favourable response to the pilot, and anyway CBS want to be the first network out with an action show in which the personal computer features heavily.

As I also mentioned in the previous column, the show will feature kids fighting crime with the use of computers, and will show technology (according to the producer) realistically but slightly ahead of state of the art.

That will be interesting all in itself. With giant strides being made so rapidly, slightly ahead when the series is shot may be slightly behind when it is finally shown. I shall let you know how it all turns out come September.

Coleco, the American video game company, stole the show at the recent Summer Consumer Electronics Show in Chicago. Their new home computer, the Adam, includes 80K of RAM, tape drive, a word processor in ROM, and a letter quality printer, all for under \$600.

As anticipated, the computer is designed to be an extension of the already available Coleco video game player, and all software and games are compatible between game player and computer. Present owners of the game player can update for about \$400.

The Adam uses a 780 which addresses 64K, and a TI device that is designed to drive the 16K RAM devoted to screen graphics. The printer and the keyboard each have their own processor chips too.

Rather than go head to head with other small computers, Coleco has concentrated more on the software end. Contrasting with other computers of similar price which come up in BASIC, when a user powers up the Adam, the resident word processor called Smart Writer comes up.

This program allows a 78 column display, and functions very closely resembling those available on a conventional typewriter.

A 64K expansion module is also planned. The company says this will allow versions of, say *Donkey Kong*, with more features than the arcade version with excellent graphics.

Adam will get plenty of software from a type of cassette called digital data packs. This looks like a conventional cassette machine, but stores data digitally rather than by analog methods. According to Coleco, this allows for a data transfer rate rivaling the floppy disc. Each pack could store as much as 500K, which translates to about 250 text pages.

Interestingly enough, the Adam will come with a version of BASIC on data pack that will be source compatible with Applesoft. Since more Apples are used in schools than any other single brand of computer here, Coleco's thoughts run along the lines that Johnny and Mary can write programs at school on the Apple, and bring them home to run on the Coleco. Sort of like getting a less than half price Apple.

Regarding the letter quality printer, it uses a standard daisy wheel, and will be able to print up to 80 columns. Coleco is claiming 120 words per minute throughput.

Even with all the hoopla at its so-called debut, company officials did not deny that the exact specs for the machine were still not firm, and that they will be unable to meet demand for some time to come. Still, the machine sounds like it will be capable of doing many things very well for such a low price. I shall look forward to seeing an actual unit.

That's all for this week. See you next time.

Bud Izen

Fairfield, California

# ORIC-1, VIC-20

The meanest game of space invaders you'll ever play!

only £5.50

### FEATURES

- Written by the type...
- Mystery...
- Bonus lives every 2000 points
- Deadly PACPERSON attacks

You are in a land with robots...

A great shoot-'em-up, all action arcade game, for the 16K or 48K Oric-1 or unexpanded Vic-20.

**ARCADEA SOFTWARE**

FREEPOST SWANSEA, SA3 4ZZ

# MUSHROOM MANIA

For the 16K or 48K Oric-1

So fast, it'll take your breath away!

only £5.50

### FEATURES

- Written entirely in MACHINE CODE
- Over 50 skill levels
- Random scoring spiders
- One or Two Player Option
- Hal. of Fame
- Full colour and sound
- Bonus lives every 2000 points
- Deadly PACPERSON attacks

Blast the fast moving centipede, as it snakes down towards you, in the depths of the green forest. Score points by shooting-up mushrooms and the deadly spiders. But beware of the hungry PACPERSON, which will gobble anything in its path. The higher your score rises, the faster the action becomes, until it is only a screaming blur of colour and sound.

### Activate Neutralise

The gremlins seem to have got at my Atan program, published on p 25 of HCW 15, and taken away line 5020. The missing line is as follows

```
5020 FOR A=15 TO 0 STEP
      1 SOUND 0,75,10,A
      FOR E=1 TO 5 NEXT E
      SOUND 0,0,0,NEXT A
      GOTO 1000
```

David Ryan, Bannbridge, N. Ireland

### TI's software shortage

I am writing to congratulate you on the TI-99/4A program published in your March 29-April 4 edition, entitled "Playing around with pixels". I would like you to extend my admiration to the compiler, David Gray

The expertise, extended conception and imaginative projection shown in the construction of this program are in my opinion truly outstanding. Indeed, my grandchildren use it as a construction game, although I have noticed the elder one (aged 9) making semi-secretive notes to the hexadecimal codes of her favourite creations. For future reference, I presume

Now my plea. As you may well know, there is a desperate shortage of cassette software for the TI. Many of the few cassettes offered are repros from Vince Apps book "35 programs for ...." and with all due respect to Mr Apps, who knows his stuff, the programs in this book are for the struggling novice to insert himself, and therefore more than a little on the simple side

The TI is being promoted on TV and in the High Street shops at present, and this, coupled with

price reduction and cutting plus the £50 value free offer, is bound to increase the number of TI owners, many, like myself, are capable of originating really first class programs

There are cartridges of course, but these are too expensive for us low budget enthusiasts to buy and in any case, I feel sure that some of us would welcome programs more mind challenging than Space Invaders or Mazes

So... please... could not the talents of the writer of the Pixel prog, or any others with similar capabilities, let us have some interesting stuff for the TI-99/4, this nice little machine that has been so dreadfully neglected by the cassette software producers

John Woods, Halifax, West Yorks

*HCW has now started to publish reviews of some TI software which we hope will be of use to TI owners*

### A satisfied customer...

Ever since your first edition people have been writing in to complain about ordering software and hardware by mail order and receiving poor goods and poor service

Another issue that was discussed in early editions was the forthcoming shakeout in the software market, with predictions that a lot of small firms are going to find it hard and go out of business

As you may or may not know, nearly all small firms are mail order only operations. All these complaints make the business look untidy and disorganised — this is very damaging and can scare potential customers away

I have only seen about two letters of praise for computer firms in your magazine, and the same applies to other magazines — too much complaining and not enough praise

I have had great service from all mail order firms I have dealt with. I have never had to wait longer than a week for anything I have ordered, and I would particularly like to congratulate Texas Instruments on their service. If you bought a TI-99/4A before 31 January this year you could claim for a £50 rebate. Within two weeks I received a cheque for £50, and I consider this great service

A. Tanner, Headington, Oxford

### ... But one's not so happy

I recently bought a TI-99/4A and, feeling very proud, sent off for my free offer of the speech synthesizer and games paddles with Basic cartridge and booklet. It was quite a saving on the price for me

But sad to say I am still waiting. We did not realise that on some of the computers, the serial numbers have not been stamped in, and the company wouldn't accept the order without a serial number

After telling Texas Instruments twice and informing the shop, I am still waiting to find out what's happening

Are the computers really made in Texas? How come only a few slipped through the net?

F. Wilkins, Birmingham

*Kirsty Clift of TI said "Most of the TI 99/4A for the UK market come not from Texas but from Rieti, Italy, and it was a change in the manufacturing process there that caused the trouble"*

*The few computers that were sent out without a serial number stamped on did have a sticky label with a date code number, though, and if your computer hasn't got a serial number, the date code number will do just as well for the offer*

*We've had some confusion over our free offers, and I'd just like to make it clear that there are two of them. The first is for free games paddles, a games cartridge and a Basic tutor cassette, and is available if you bought a TI-99/4A between May 3 and July 2*

*The second is for a free speech synthesiser or a free program recorder, and is available for those who bought six TI plug-in games cartridges between April 30 and July 2*

### Review it again, T.D.

I am writing to congratulate T.D. (whoever he may be) on his brilliant write-up of Crazy Chamber/Apple Bug in HCW 15. It was witty, informative and very eye-catching

I only wish more magazines would do it this way. It would make the reviews so much more enjoyable to read

A. MacDonald, Sudbury, Suffolk

# Best of British programming?

**English software is flying the flag in the US-dominated Atari software market. Its boss Phillip Morris talked to Candice Goodwin about his plans not just to compete in the market but to lead it**

Considering the number of software companies there are in the UK, it may seem eccentric of Philip Morris to have called his firm, The English Software Company. But then, you've got to remember that he had the American market in mind.

He said: "Americans are very keen on English people and products. I think it's because of the Royal Family".

English's original logo — a cottage in a rose garden — was designed to have transatlantic appeal. For UK buyers, though, Phillip has dreamed up a more high-tech logo with a video effect. He said: "In this country, cottages are associated with cottage industries — which seems a bit silly since we're in the middle of Manchester".

English is an offshoot of Phillip's shop, Gemini Electronics, and shares the same premises at 50 Newton Street, Piccadilly, Manchester. Gemini sells computer chess games, Atari games machines, Commodore and Atari micros and a range of software.

Gemini itself developed out of an earlier business Phillip had selling computer games machines by mail order — so he's been in the computer games business in one way or another since 1978.

But the idea of selling his own brand of software was sparked off by one of Phillip's customers, Steven Riding. Having bought an Atari micro for Gemini, Steven got interested in machine code programming. The result was *Airstrike*, a cross between *Scramble* and *Defender*.

Steven offered *Airstrike* to Phillip, who started to sell it by mail order as well as through the shop. But he also had the bright idea of trying to beat the Americans at their own game by selling *Airstrike* in the US — where the Atari is, of course, a giant seller.

So last summer Phillip's brother Brian set off to seek the company's fortune in sunny California — and that's when the name and logo were originated.

The made-in-England theme extends to Phillip's programming team, which he describes as "the best of British programmers". But finding good programmers has been and continues to be a problem.

The problem is that the Atari uses three separate processors: it has special sound and graphics processors in addition to the main

processing chip. Most home micros only use one all-purpose processor.

So would-be machine code programmers have to understand how the three processors work together, as well as knowing how to make the most of each processor's special abilities.

"You have to learn a lot more about the Atari before you can program it", according to Phillip. "It can take six months to write a program from scratch."

A lot of Phillip's programmers got interested in programming when they bought an Atari from him. He reckons that, although most people initially buy the Atari micro for games, they start programming because of the machine's potential — among other things, it can give you 256 colours on screen at once. But that's not so surprising when you remember that it uses the same chips as the Atari arcade machines.

As well as *Airstrike*, English Software's range now includes

four more games, on disc as well as cassette, and three utilities. Six more games are scheduled for the end of July, which will be on cartridge as well as cassette.

By the end of the year, Phillip thinks English will be the largest Atari software house in the UK — apart from EMI, that is. He wants to give Atari owners a better deal firstly by informative advertising, with a screen picture and description of every game, and secondly by competitive pricing.

English cassette games cost £15.95 — about a third cheaper than equivalent US products — and in the long term he hopes to bring the price of cartridges down from £30 to around the £20 mark. "Mass production plus new types of chips will mean that cartridges will soon be cheaper to produce", he said.

Phillip also plans to explore the demand for very low-priced games for the Atari later in the year, by offering two or three games for £5 if they are bought

along with a £15 game. But he said he didn't intend to lower his standards.

"Atari owners are very selective in what they buy", he said. "They might buy five games a year, instead of one a week like you would for the Spectrum. But those five games will have lasting appeal." High-quality graphics and an original theme is what he is aiming for in all English's games.

The pick of the English crop will go over to the States to tackle the Atari software market on its home ground. Though the competition over there may be formidable, the potential is enormous, with over half a million Atari machines to cater for.

And when Atari brings out its new machines, which are compatible with the 400 and 800, that potential will increase still further.

Meanwhile, back in the UK, English Software's programs will be appearing on television in the north east this August. Granada TV will be featuring *Xenon Raid* as the competition game on its *Chip-In* series.

"The programme is being made in Granada's Liverpool studios", Phillip said. "So we changed the backdrop of *Xenon Raid* to look like the Liver buildings."

Pointing the way to new trends in Atari software: from left to right, Steve Riding, John Brierley, and Phillip Morris himself.

### MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements):

**CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.**

# 'NOW WIN THE POOLS'

THIS IS MEANT FOR YOU — ESPECIALLY IF YOU USE A SINCLAIR ZX81 or SINCLAIR SPECTRUM COMPUTER or even ANY COMPUTER

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" - AT LAST YOU CAN TURN IT INTO A REALITY'

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" - IT CAN BE DONE. I DISCOVERED THE SECRET A LONG TIME AGO - NOW, FOR THE FIRST TIME I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU - I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:-

| First Dividends | Second Dividends | Third Dividends | Fourth Dividends | Fifth Dividends | Sixth Dividends |
|-----------------|------------------|-----------------|------------------|-----------------|-----------------|
| 765             | 1,818            | 2,942           | 1,952            | 631             | 83              |

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS - so far).  
I HOLD THE UNCHALLENGED RECORD FOR THE POOLS WINS'

I AM MAKING THIS VERY SPECIAL, REDUCED PRICE OFFER TO READERS OF HOME COMPUTING WEEKLY FOR A LIMITED PERIOD ONLY.

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" — since I perfected my method, I HAVE WON REGULARLY for over TWENTY-FIVE YEARS — proof that it is no 'flash-in-the-pan'.

I have CHALLENGED THE WORLD with my record of wins and with all the evidence that I possess — NO ONE has ever been able to accept the Challenge — I KNOW NO ONE EVER WILL.

MY SECRET IS NOW PLACED ONTO COMPUTER CASSETTE FOR YOU.

THE METHOD IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS — IT WILL LAST FOREVER — BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS.

I now intend to give a limited number of people the opportunity of making use of my method — perfected over 25 years and proving itself on EVERY ONE OF THOSE TWENTY-FIVE YEARS.

You will have noted details of my personal achievements so far, as given to you above.

A GRAND TOTAL of 8,201, yet 8,201 POOLS DIVIDENDS, including 765 FIRST DIVIDENDS.

My Pools Winnings Dividend slips now number so many, that they fill a very large suitcase and will stand as my evidence of all claims in ANY COURT OF LAW IN THE WHOLE WORLD.

Taking just the past 25 years into consideration, I have won ON AVERAGE over 328, (THREE HUNDRED AND TWENTY-EIGHT) Pools Dividends EVERY YEAR — or — AN AVERAGE of over SIX DIVIDENDS EVERY WEEK for TWENTY-FIVE YEARS.

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc, contained herein.

Don't take my word for it, read what people write about me and my method:—

*I won on Zetters last weekend. It was not a big sum, but all the same it was a very nice surprise for me.*  
J.C., Lancs.

*I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self-promoted charlatans.*  
C.H., Devon

*Winnings cheque received today, sincere thanks.*  
D.N., Devon

*I congratulate you on your achievement.*  
R.R., Wales

*I should like to thank you for a most exciting season and look forward to hearing from you again.*  
J.C., Hants.

*I would like to acknowledge cheque and say how much I appreciate your integrity.*  
J.M., Scotland

*Many thanks for your system, it is all you say and more.*  
J.C., Lancs.

*Your wonderful system won me £3,522. I intend to visit London soon and will be able to come and see you personally.*  
(Overseas Client), P.M., Kampala.

*Many thanks for trying so hard to please us all, your brother should be thanked also. One of our daughters, WHOSE HUSBAND YOU HELPED ENORMOUSLY, has just phoned, the four of them have just spent a lovely holiday in Spain.*  
K.R., Isle of Man.

I do have losing weeks, but ON AVERAGE my winnings show over SIX DIVIDENDS EVERY WEEK for the past 25 years. I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact. Please just sit back and imagine for a moment my FIRST DIVIDEND was alone — they now number 765 (seven hundred and sixty five) and will probably be even more by the time this advertisement appears in print.

I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT.

For as long as I continue to enter the Football Pools my wins will continue. I have already said, they apply, with equal success to both English and Australian Football Seasons.

I intend to release a STRICTLY LIMITED NUMBER of copies of my cassette, (either for Sinclair ZX81 or Sinclair Spectrum) — DO NOT DELAY AND FIND YOU ARE TOO LATE, in which case I would have to refund your money.

I am so confident of YOUR success that if do not win at least THREE FIRST TREBLE CHANCE DIVIDENDS in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time, no matter how vast your winnings.

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc, but it is of course impossible — they now number 8,201 dividends. I have however given JUST A FEW EXTRACTS from ORIGINAL LETTERS I hold from my small Clientele.

I am the Inventor and Sole Proprietor of my method, Registered as EURPKA — ('I have found it'). I am known as The Professor in Pools Circles — I am of the Highest Rank in Forecasting — this is beyond dispute. I am marketing a limited number of Computer Cassettes, under my Registered Company — FOOTBALL ENTERPRISES.

My initial charge for a copy was £75, but for this SPECIAL REDUCED PRICE OFFER I will send you a copy, (for ZX81 or Spectrum) for £20, (twenty pounds) ONLY, plus your Promise to pay me the balance of £55 — ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS IN YOUR FIRST 20 WEEKS OF ENTERING — otherwise you owe me NOTHING FURTHER.

This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery I could easily CHARGE £2,000 per cassette on the evidence I possess, but that would not be fair to everyone, which is what I want to do.

My method is WORLD COPYRIGHT, any infringement and immediate proceedings will be taken, without prior warning. It is truly ingenious and has stood the test of time.

My cassette is simplicity itself to operate and you'll be given FULL DETAILS for weekly calculating. Your entry need not involve you in any large weekly stakes, you can enter for as little as 25p, if you wish.

I charge NO COMMISSION on any of your wins — no matter how BIG they may be.

I realised a long time ago, that it was no good sitting down and dreaming about winning the pools, so I lit the candle at both ends, working late into the night, occasionally RIGHT THROUGH THE NIGHT, I KNEW there was a way, eventually it all paid off and has been doing so ever since.

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the cassettes I have prepared and am making available.

IMMEDIATELY I perfected my method I commenced winning right away, (first with just a little £163, the first week I used it), I HAVE NEVER LOOKED BACK SINCE, amongst all those dividends was one for over EIGHT THOUSAND POUNDS for just one eighth of a penny stake.

I will release a copy on cassette, to you, on receipt of the completed order form and your Signature thereon, confirming you will treat it in the STRICTEST CONFIDENCE between us and retain it for your OWN USE ONLY.

PLEASE NOTE: If you happen to be the proud owner of a Computer, other than a Sinclair ZX81 or Sinclair Spectrum, you can still purchase a copy of my method, for the same price and program @ YOURSELF on to YOUR OWN COMPUTER.

*I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once I've won a few amounts I shall be staking from winnings and at 2p per line, A FIRST DIVIDEND last week at this would have been over £3,000.*  
C.A., Yorks.

I am very interested indeed and enclose £20 herewith. I agree to pay you the balance of £55 ONLY if I win at least THREE FIRST TREBLE CHANCE DIVIDENDS in my first 20 weeks of entering — otherwise I owe you NOTHING FURTHER at any time — no matter how much money I win. My Signature below is my Undertaking to retain complete and absolute confidence about the method.
